

BORESAVER LIQUID ENHANCER

DESCRIPTION

BoreSaver Liquid Enhancer is a cleaning treatment used for the severe contamination and ongoing management of iron bacteria found in bores, wells, pumps, pipes and water supply systems.

Use of **Liquid Enhancer** improves water supply, increases output and extends the working life of pumping equipment and accessories. **Liquid Enhancer** is safe and easy to use. It can be used without dismantling equipment and will not attack or deteriorate any materials inside the system.

For help with assessing the nature and extent of the contamination refer to our *Range Usage Chart*.

TECHNICAL CHARACTERISTICS

Liquid Enhancer is supplied as a liquid and is an aqueous proprietary blend with bacteriostatic properties, used for severe contamination and the on-going management of iron bacteria.

Liquid Enhancer is primarily a maintenance product for the control of iron bacteria and generally used in isolation. When blended with other BoreSaver treatments it combines to produce an enhanced and focussed treatment.

Liquid Enhancer was developed in Australia by Aquabiotics Industrial.

MAIN CHARACTERISTICS

Liquid Enhancer is added directly to the water system and the amount to use is based on the volume of water. The **Liquid Enhancer** treatment works directly on the bacteria, disrupting and dissolving the cell walls. The pump-in recycling rehabilitation method is then used to safely pump the bacteria away.

The frequency of follow up cleaning will be determined by the natural conditions in the system although a regular maintenance programme is recommended. Used on its own and regularly **Liquid Enhancer** provides total bacterial growth control.

To ensure the best possible results a *Well Rehabilitation Analysis Checklist* has been developed which should be completed before use. We recommend the use of a good quality downhole CCTV camera to accurately assess the nature and extent of the contamination. Please refer to our technical department with any queries.

Liquid Enhancer is available in 1 litre and 5 litre containers.

Liquid Enhancer can be used in conjunction with all other BoreSaver treatments for enhanced bacterial control. Refer to our technical department for advice.
